

# Automatic Glossaries in LaTeX

writeLaTeX

May 7, 2014

## 1 Example

The `glossaries` package automatically generates a list of glossary entries. It's great for keeping track of your **domain knowledge** and **Three Letter Acronyms (TLAs)**. In this example we've put the glossary definitions in a separate `glossary.tex` file, which you can edit via the project menu.

### Glossary

**domain knowledge** valid knowledge used to refer to an area of human endeavour, an autonomous computer activity, or other specialized discipline. **1**

**TLA** Three Letter Acronym. **1**
