1 This can be a section

Did it *work*? Apparently **yes**, though not *all* wiki markup is supported. See `http://mirrors.ctan.org/macros/latex/contrib/nicetext/doc/wikicheat.pdf` for what's supported.

- Lists!!

- More **lists**!!!

No nested lists though.

Normal LaTeX stuff should still work. Just be careful of lists, it seems.

1.1 I can haz subsections plz?

1. numbered lists

2. remember to turn off using `\nowikimarkup` before going back to serious LaTeX stuff.

One list can't follow another immediately – need to have some intervening text.

club explain 1

window explain 2

Same here; this text needs to be here for the quote to work.

> This here is a quote.

Back to normal LaTeX behavior now. "'This is still typeset in normal weight."'
