## 1.1 Useful tools for reference managing

There are several useful tools to help organize your references. Here are some of them:

- (i) <https://www.mendeley.com>
- (ii) <https://www.jabref.org>
- (iii) <https://text2bib.economics.utoronto.ca>
- (iv) <https://truben.no/latex/bibtex/>

Lorem ipsum dolor sit amet, consectetuer adipiscing elit. Ut purus elit, vestibulum ut, placerat ac, adipiscing vitae, felis. Curabitur dictum gravida mauris. Nam arcu libero, nonummy eget, consectetuer id, vulputate a, magna. Donec vehicula augue eu neque. Pellentesque habitant morbi tristique senectus et netus et malesuada fames ac turpis egestas. Mauris ut leo. Cras viverra metus rhoncus sem. Nulla et lectus vestibulum urna fringilla ultrices. Phasellus eu tellus sit amet tortor gravida placerat. Integer sapien est, iaculis in, pretium quis, viverra ac, nunc. Praesent eget sem vel leo ultrices bibendum. Aenean faucibus. Morbi dolor nulla, malesuada eu, pulvinar at, mollis ac,

nulla. Curabitur auctor semper nulla. Donec varius orci eget risus. Duis nibh mi, congue eu, accumsan eleifend, sagittis quis, diam. Duis eget orci sit amet orci dignissim rutrum.

## 2. Methodology

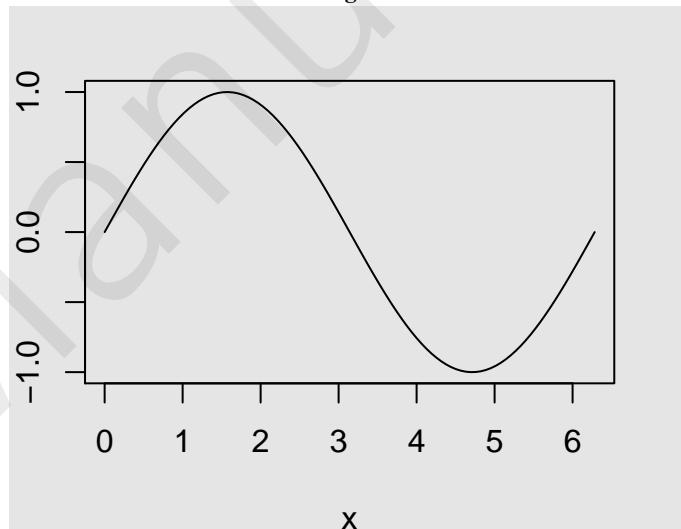

In this section you should discuss the methodology.<sup>1</sup>

### 2.1 Figures

Figure 1 was generated in R through the following code:

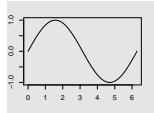

```
1 x = seq(from=0, to=2*pi, length=100)
2 cm = 1/2.54 # this is just for defining units of
               measurement
3 pdf(file='plot.pdf', width=9*cm, height=7*cm, bg=rgb
      (0,0,0,.1))
4 par(mai = c(2*cm,1*cm,.5*cm,1*cm))
5 plot(x, sin(x), type ='l')
6 dev.off()
```

**Figura 1**  
A figure

<sup>1</sup>Footnote links should come after punctuation.

Ideally, figure dimensions should be controlled *outside* of L<sup>A</sup>T<sub>E</sub>X, as the preceding R code illustrates. If you cannot generate or obtain the figure with appropriate sizing, then adding the optional argument `[width=9cm]` to the `\includegraphics` command will do the job. Below we illustrate usage of the `\includegraphics[width=2cm]{media/plot.pdf}` command.

## 2.2 The model

We write inline equations as  $x = x$  or displayed equations as

$$dX_t = \mu dt + \sigma dB_t \quad (1)$$

and reference equations using `\eqref{eq1}` to display as equation (1). Maybe we should have added this in Seção 1. You can also reference theorems, for example `\autoref{thm:1}` will produce Teorema 1.

**Definição 1.** We say that  $x$  is equal to  $x$  whenever  $x = x$ .

**Lema 1.**  $x \geq y$  if and only if  $y \leq x$ .

**Demonstração.** This is left as an exercise. ■

**Proposição 1.**  $x = x$  if and only if  $x = x$ .

**Teorema 1.** If  $x = x$  and  $y = y$ , then  $x > y$  implies  $x > y$ .

**Demonstração.** A proof with default title. ■

**A proof with custom title.** This is trivial. ■

**Corolário 1.**  $x > y$  if and only if  $y < x$ .

**Comentário 1.** This is a remark.

## 3. Results

You can add tables easily: see Tabela 1. There are three custom column types that accept width specification: `L`, `C` and `R`, which work similarly to the standard `p` column type; for instance, use `C{4cm}` for a (horizontally) centred column 4cm wide. Notice, however, that L<sup>A</sup>T<sub>E</sub>X has some inconsistencies regarding lengths, as Example 1 illustrates. Thus, some manual fine-tuning may be necessary to obtain tables with the desired width.

**Tabela 1**  
**A simple table**

variable	value	p-value
X	1	0.0
Y	-1	0.8
You can write long texts inside table cells, with custom linebreaks	A	B

Table descriptions go here. Lorem ipsum dolor sit amet, consecetur adipiscing elit. Ut purus elit, vestibulum ut, placerat ac, adipiscing vitae, felis. Curabitur dictum gravida mauris. Nam arcu libero, nonummy eget, consectetuer id, vulputate a, magna. Donec vehicula augue eu neque. Pellentesque habitant morbi tristique senectus et netus et malesuada fames ac turpis egestas. Mauris ut leo. Cras viverra metus rhoncus sem. Nulla et lectus vestibulum urna fringilla ultrices. Phasellus eu tellus sit amet tortor gravida placerat. Integer sapien est, iaculis in, pretium quis, viverra ac, nunc. Praesent eget sem vel leo ultrices bibendum. Aenean faucibus. Morbi dolor nulla, malesuada eu, pulvinar at, mollis ac, nulla. Curabitur auctor semper nulla. Donec varius orci eget risus. Duis nibh mi, congue eu, accumsan eleifend, sagittis quis, diam. Duis eget orci sit amet orci dignissim rutrum.

**Exemplo 1.** This example illustrates length inconsistencies in L<sup>A</sup>T<sub>E</sub>X.

a	b	c
x	y	z

The source code yielding the rule and table above is as follows:

```

1 \noindent\rule{.6\textwidth}{1cm}
2 \noindent\begin{tabular}{L{.2\textwidth}C{.2\textwidth}R{.2\textwidth}}
3 \toprule
4 x & y & z\tabularnewline\bottomrule
5 \end{tabular}
```

### 3.1 Some additional features

Table 2 illustrates how to align numbers by the decimal place marker. It also shows how to implement the `\multirow` command.

**Tabela 2**  
**Another simple table**

variable	value	p-value
$X$	1.001	0.0
$Y$	-10.00	0.8
$Z$	$Z_1$	1.1
	$Z_2$	2.2
		0
		0

Here are two useful tools to help formatting L<sup>A</sup>T<sub>E</sub>X tables:

- (i) <https://www.tablesgenerator.com>
- (ii) <https://truben.no/table/>

## A. Additional tables and figures

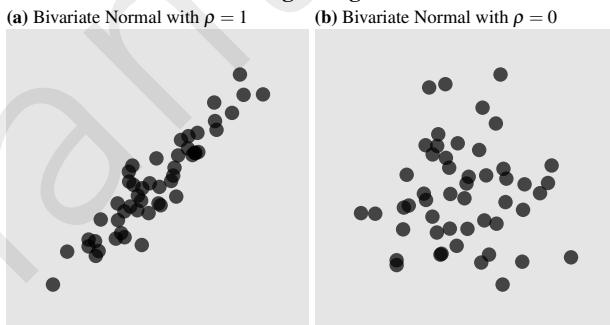

This appendix has some additional tables and figures, for example Table A1 illustrates how to generate a sideways table, and also shows how to implement the `\multicolumn` command. Figure A1 illustrates usage of sub-figures. Panels A1a and A1b were generated in R through the following code:

```

1 set.seed(123)
2 cm = 1/2.54
3 x = rnorm(50)
4 pdf(file='plot2a.pdf', width=4*cm, height=4*cm, bg=rgb
      (0,0,0,.1))
5 par(mai = c(.5*cm,.5*cm,.5*cm,.5*cm))
6 plot(x, x+rnorm(50, sd=.4), pch=16, col=rgb(0,0,0,.7),
      bty='n', axes=FALSE, ann=FALSE)
7 dev.off()
8
9 pdf(file='plot2b.pdf', width=4*cm, height=4*cm, bg=rgb
      (0,0,0,.1))
10 par(mai = c(.5*cm,.5*cm,.5*cm,.5*cm))
11 plot(x, rnorm(50, sd=1), pch=16, col=rgb(0,0,0,.7), bty='
      n', axes=FALSE, ann=FALSE)
12 dev.off()

```

**Figura A1**  
Adding subfigures

**Tabela A1**
