1 Introduction

2 Section 1

2.1 Subsection 1

2.1.1 Subsubsection 1

You won’t find subsubsections but you can also add a paragraph

Paragraph if you really need another layer.

But you can also modify the document if you really need more subsections.

3 Examples

This is how you reference labels. Section 3 explains how to reference labels. Section 3.1 explains how to cite papers.

3.1 Citing

This is one citation [1]. This is another citation [2]. You can aggregate citations [1, 2].

3.2 Theorem

Theorem 3.1 This is one way to define a theorem

You can also reference the Theorem 3.1.

3.3 Coloring text for revision

You can color your text in case you want to add comments during the review of your comp I.

3.4 Adding images

This is how you reference an image Figure 1.

Figure 1: You can cite the source in the caption [3].

This is how you reference a sub-image Figure 2a.
3.5 Adding equations

Equation 1 is Euler’s favorite equation. Maybe you want to cite as IEEE style? (1) shows Euler’s favorite equation.

\[ e^{i\pi} + 1 = 0 \]  

\hspace{1cm} (1)

3.6 Adding tables

Table 1 is a simple table.

<table>
<thead>
<tr>
<th>Class</th>
<th>Feature 1</th>
<th>Feature 2</th>
<th>Feature 3</th>
</tr>
</thead>
<tbody>
<tr>
<td>Class 1</td>
<td>a</td>
<td>a</td>
<td>a</td>
</tr>
<tr>
<td>Class 2</td>
<td>a</td>
<td>a</td>
<td>a</td>
</tr>
</tbody>
</table>

Table 2 contains more advanced components.
Table 2: This is a comprehensive table

<table>
<thead>
<tr>
<th>Difficulty</th>
<th>CNN</th>
<th>CNN+LSTM</th>
</tr>
</thead>
<tbody>
<tr>
<td>Easiest</td>
<td>Model 1</td>
<td>Model 2</td>
</tr>
<tr>
<td></td>
<td>calm</td>
<td>angry</td>
</tr>
<tr>
<td></td>
<td>angry</td>
<td>disgust</td>
</tr>
<tr>
<td></td>
<td>neutral</td>
<td>surprised</td>
</tr>
<tr>
<td>Hardest</td>
<td>sad</td>
<td>neutral</td>
</tr>
<tr>
<td></td>
<td>surprised</td>
<td>sad</td>
</tr>
<tr>
<td></td>
<td>happy</td>
<td>happy/fearful</td>
</tr>
</tbody>
</table>

3.7 Lists

This is an unordered list

- Item 1
- Item 2

This is an ordered nested list

1. Item 1
   - (a) Item one
   - (b) Item two
   - (c) Item three

2. Item 2

3.8 Algorithms

Algorithm 1 shows how to write pseudocode.

**Algorithm 1: Example of algorithm**

- **Result:** Write here the result
- initialization;
- while *While condition* do
  - instructions;
  - if *condition* then
    - instructions1;
    - instructions2;
  - else
    - instructions3;

You can also import code, if you really need to show the exact code that you used. For example, Algorithm 1 shows how to do research.
import coffee
import research
from research import paper

if coffee.empty():
    coffee.make()
else:
    coffee.drink()
    for paper in papers:
        info = paper.read()
        literatureReview.append(info)
    research.writePaper(literatureReview)

Algorithm 1: How to do research

4 Conclusion
