Abstract
These are guidelines for preparing papers for the Journal of Electrical Bioimpedance. The journal accepts original research papers and review articles within the broad field of electrical bioimpedance. Use this document as a template if you are using LaTeX; otherwise, use this document as an instruction set. The paper size is A4 (21 × 29.7 cm).

Keywords: Bioimpedance; current; voltage

Introduction
This document is a template for LaTeX. Please use the electronic version of this document as a template when you produce your manuscript for submission to the Journal of Electrical Bioimpedance. The paper size is A4 (21 × 29.7 cm).

The introduction section of your paper should include the necessary background information, including an adequate review of earlier findings and the justification for conducting this study.

Materials and methods
The margins in this document are set to 2.5 cm for the top and 1.5 cm for the sides and bottom. The main body of the manuscript is in two columns separated by a 1 cm. The line spacing is 1.1, and the references list has 3 pt spacing between each reference.

Body text is Computer Modern Bright (which is quite similar to Calibri) at 10 pt. Level 1 headings are in bold and level 2 headings are in italic.

In the materials and methods section, please describe all necessary details on how the study was performed. Do not include any discussions of the work in this section. Enough information should be given so that other researchers can reproduce your study.

Informed consent
Informed consent has been obtained from all individuals included in this study. (Keep this sentence if applicable.)

Ethical approval
The research related to human use has been complied with all relevant national regulations, institutional policies and in accordance with the tenets of the Helsinki Declaration, and has been approved by the authors’ institutional review board or equivalent committee.

The research related to animals use has been complied with all the relevant national regulations and institutional policies for the care and use of animals.

The conducted research is not related to either human or animal use.

(Keep one of these sentences as applicable.)

Results
All figures should be numbered consecutively with the figure legend indented 0.5 cm on each side. See figure 1 for an example. Figures may be in color or black and white and must be of such quality that they produce clear and sharp printouts on an ordinary (color) laser printer.

What to include
Use this section to present the results from the measurements or studies that were described in the last section, but without going into any discussion about the results.

Discussion
Now you can discuss your results. Emphasize the new and important aspects of the study and the conclusions that follow from them. Do not repeat in detail data or other information given in the Introduction or the Results section. After this section there may be sections called Conclusion and Acknowledgments. The last section is References.

Reference style

The *Journal of Electrical Bioimpedance* uses primarily the Vancouver style of references with numbers in square brackets in the text and a numbered list in the Reference section.[1] However, using the Harvard reference style will also be accepted in some cases.

Conflict of interest

Authors state no conflict of interest. (Either keep this sentence or describe any conflict of interest.)
