

# Northern European Journal of Language Technology: Template

Anonymous authors

---

**Abstract** Here are the guidelines for typesetting a manuscript for the Northern European Journal of Language technologies. The guidelines follow themselves and so are an example of the results. These cover manuscripts both submitted for review and for camera ready. Please follow all the instructions here. If you use a template, this will do much of this for you.

---

## 1 Introduction

Documents not in this template risk rejection without review. Do not adjust the font sizes. Submissions must be one PDF file, formatted as A4.

## 2 Length

For a full paper, any length is fine, though 7-11 pages is recommended. Longer papers are held to a higher standard. Shorter papers are welcome for highly-impactful results.

Letters should be up to around 1000 words, and may include 2-3 floats (i.e. tables or figures). This will be around two pages in this template, including front matter and bibliography. These are reviewed more quickly than full papers and designed to relay a sharp and timely result, or a comment on the field.

Appendices and bibliography do not count towards the page limit. Appendices must follow after the bibliography with each appendix starting on a new page.

## 3 Section Headings

Use Arabic-numbered section headings. The (optional) acknowledgements and (required) references sections must appear in that order, and not be numbered. Section titles should be in title case.

## 4 Footnotes

In general, try to avoid footnotes, instead including the content inline. If one must be included, the number must be placed after adjacent baseline-connecting

punctuation such as commas, full stops and semi-colons.<sup>1</sup>

## 5 Figures and Tables

Place these items close to where they are first mentioned, and not all at the end of the document.

Provide a caption with every table and illustration. The caption should be below the item. Authors should use palettes that work for a wide variety of colour perceptions, and employ saturation and lightness as well as hue to convey information. Vector illustrations must be used unless the source information is bitmap-based (e.g. photographs). If tables use lines, these should be well-connected without spurious gaps between rows.

## 6 References

Use author-date citations, not numbers. Include all authors in the bibliographic entry. Use `\newcite` for in-line references. Attribute agency to authors and not manuscripts, e.g. "Inie and Dalsgaard (2020) find that [...]"

One may cite one's own work, but in the third person, in order to preserve anonymity.

Place all references together under a References heading. List them in order of first author surname, subsorting by year (ascending). Only include references that are cited within the text. Ensure that every reference mentioned in the text is expanded in the reference section.

Titles should have correct capitalisation; forcing sentence case is not always appropriate. E.g. use "BERT" instead of "Bert" or "bert".

<sup>1</sup>This is where a footnote marker should be placed, but try to avoid footnotes overall.

System	F1	Variance
ABC-D	0.720	2.1%
Baseline	0.671	0.9%

Table 1: Sample table. Captions go below the table. Avoid superfluous horizontal lines.

58 Do not use an arXiv reference where the paper has  
59 also appeared in a peer-reviewed venue. In that case,  
60 use the peer-reviewed reference.

## 61 7 Lipsum Padding

62 See Inie and Dalsgaard (2020). Quisque ullamcorper
