

# The `sintefposter` class

Federico Zenith

SINTEF Applied Cybernetics, Trondheim, Norway

`federico.zenith@sintef.no`

## Class Description

This class is meant to prepare posters for academic conferences. The class is not particularly original: it is essentially a custom configuration of `sciposter`.

The SINTEF corporate colors are taken from the `sintefcolor` package, which is therefore necessary to have together with this class. The class uses Carlito, a free clone of Calibri, so `sintefposter` can be compiled with any  $\text{\TeX}$  compiler.

The poster title is set to be in SINTEF blue and `\huge` size.

All class options will be passed to `sciposter`, so you should refer to its documentation on CTAN, however some sensible defaults were chosen for you:

- Font size is set to 36pt. The default for `sciposter` is ludicrously

small, unless you have bad results and want no one to read them.

- Sections are a bit more sober than the default in `sciposter` (`plainsections` option). If you choose to use the block layout, the colours have already been changed to SINTEF corporate colors.
- The SINTEF logo automatically appears in the left corner. This can be overridden with `\leftlogo{}` or `\noleftlogo`.

## Suggestions & Links

Refer to `sciposter`'s manual for how to customise the poster layout.

To insert figures with text wrapped around them, use the `wrapfig` package.

For best results in plots, the `pgfplots` package makes it easy to keep the same font style and size in plots as in the text.
