Document History

VERSION	DATE	VERSION DESCRIPTION
2.0	2012-12-21	<p>Insert the history with the <code>\history{}</code> command. Use the <code>\historyentry</code> command to add entries within it:</p> <pre>\history{ \historyentry{version}{date}{description} \historyentry{...}{...}{...} }</pre>

Contents

1	Class Options	5
----------	----------------------	----------

ATTACHMENTS

Set with `\attachments{}`

The simplest report you can write is:

```
\documentclass{sintefreport}
\title{My Report}
\begin{document}
\frontmatter
Hello world!
\backmatter
\end{document}
```

Use `\frontmatter` to set up the front page, history page and table of contents, and `\backmatter` to set up the back cover.

1 Class Options

This class takes some special options for classification: `unrestrictedsummary`, `restrictedsummary` and `confidentialssummary` determine the classification of the summary page (page 1).

Fields can be set with several commands. All relevant fields default to a “Set with `\command`” description, so, to know which command to use to set a certain field, just compile a the empty file and look at the resulting PDF.

This class inherits from `sintefdoc`, so everything mentioned in that class’ documentation is valid here as well.
