

JBC manuscript titles should be short (no more than 150 characters, including spaces) and informative

Author One¹, Author Two²

From the Department of ¹Biology and ²Pharmacology, University of Examples, Fictiontown, CA 10101

Running title: *Running title may not exceed 60 characters and spaces*

To whom correspondence should be addressed: Corresponding author's name, telephone and fax numbers, and current e-mail address.

Keywords: keyword 1, keyword 2, keyword 3, keyword 4, keyword 5, etc..

ABSTRACT

The abstract should succinctly and clearly describe 1) the background context for the work, 2) the open question being explored in the manuscript, 3) the major findings reported in the manuscript and 4) the significance of the findings to those in the field and to the broader scientific community. Before you begin, a friendly reminder: Supporting information is optional. Most Supporting Information can be submitted as a single pdf file; this pdf should begin with the title of the article, the names of the authors, and a list of the material included. Pages should be numbered S-1, S-2... Tables and figures in Supporting Information should be labeled Table S1, Table S2. . . Each figure legend should be placed directly by the figure. If references are used in this section, a list should be placed at the end. All supporting tables and figures must be of high quality. Supporting Information in file types other than pdf, such as large data files, movies, etc., should be submitted in their native formats as separate files, and the content listed/described in the main Supporting Information pdf.

The introduction begins after the abstract and is not preceded by the word "Introduction."

The introduction presents the purpose of the study and its relationship to earlier work in the field. It should not be an extensive review of the literature. It is usually less than one formatted page

RESULTS

The results should be presented in figures, tables, and text. Figures (e.g. Figure 11) and tables (e.g. Table 1) should be displayed in order after the main article text. Figure and table legends should be placed immediately after the corresponding figure or table. References, such as (1–4), must be cited in text by number only, be numbered consecutively in the order of appearance, and must include article titles, as in these examples.

References, such as (1–4), must be cited in text by number only, be numbered consecutively in the order of appearance, and must include article titles, as in these examples.

Reference management systems such as Zotero and Mendeley provide options for exporting bibliographies as Bib_TE_X files. Bib_TE_X is a bibliographic tool that is used with L_AT_EX to help organize the author's references and create a bibliography. This template contains an example of such a file, `sample.bib`, which can be replaced with your own. Use the `\cite` command to create in-text citations.

DISCUSSION

The discussion should be concise (usually less than two formatted pages) and focused on the interpretation of the results. It should not repeat information from the "Results" section.

EXPERIMENTAL PROCEDURES

The experimental procedures should be brief but sufficiently complete to permit a qualified reader to repeat the experiments. Only truly new procedures should be described in detail. Pre-

viously published procedures should be referenced. Modifications of previously published procedures should not be given in detail except where necessary to repeat the work. If the study characterizes the activity of new compounds, compound struc-

tures and synthetic protocols, isolation strategies or other sourcing must be provided. Quantification of gel or blot intensities must be performed with data obtained within a linear range of exposure.

Acknowledgments: Acknowledgments may include funding sources, brief note(s) of thanks to people who helped with the study or preparation of the paper (optional), and database names and accession codes (if applicable).

Conflict of interest: Statement disclosing whether there are any actual or perceived conflicts of interest on the part of any author. If there are no conflicts of interest, insert the following statement: The authors declare that they have no conflicts of interest with the contents of this article. Review the “Conflicts of interest” section of the [JBC Editorial Policies](#).
